An Introduction to Math for 5-6 year olds

By Rebecca of Amazon

Kids are always looking for something fun to do, so if your child likes to color, they can learn all about numbers and shapes while being artistic.

Each page is well organized with colorful borders and black-and-white "coloring book type" pictures. The focus is on preparation for a more formal study of math.

This is a complete home-study program to encourage children to practice the essential math skills they are learning at school. The workbooks were compiled and tested by math experts and are designed to increase your child's success at school.

In the front of the book you will find a Progress Chart and a page of stars. Once your child has completed each page, you stick a star in the box that corresponds with the lesson. The workbook is designed to help your child explore the world of numbers in a fun and enjoyable way. There are connect the dots games, Can you remember? challenges and counting games.

The Content:

Names of the numbers 1-10 and 11-20

Sequence, or order of the numbers.

Number values. Understanding the quantity that each number represents and that, for example, 5 is always 5.

It may be 5 big buses in a row or 5 small

peas in a circle, but it is still 5!

That when counting, the last number names the set. Many children count the quantity accurately 1, 2, 3, 4,

but in response to "how many?" they often say

the wrong number.

How to recognize written numbers.

How to write numbers.

How to recognize a number when it is written in words, and how to write it.

The concepts of more than and less than, initially by looking and then by counting.

Adding numbers together, language involved in the addition process, symbols for addition and subtraction.

Shapes and color

Measurement

Positional language - In front, behind, inside, outside, between, beside, above, etc.

Shapes, objects and patterns, identifying matching items, sorting things into

sets, adding to sets, recognizing patterns and putting events in a sequential order.

32 pages are devoted to "Notes for Parents." Here you will read about how to encourage your child to color in the illustrations and how this will help to develop pencil control, increase eye-hand coordination and build concentration. They advise a range of colored pencils or felt-tip pens. The page-by-page notes also give more insight into each activity sheet.

Well designed and supports National Council of Teachers of Mathematics Standards.

Best Math Supplement for Preschoolers

By I. Shiraishi

I ordered this book not knowing what it was going to be like. When it got here and I started flipping thru it all that came to my mind is amazing. My son loves this book particularly the star sticker system where the child receives a star for every page it has finished. The pages are set up in a simple manner so your child almost automatically understands what it has to do. The book teaches your child all the math basics from counting to same size, same number, greater , smaller etc. So sit down with your toddler and have fun learning math using this book :D
