## Review

"Quantum physics could be daunting to the lay person, but Fred Alan Wolf has simplified and made these abstract concepts very comprehensible. In his new book, Time Loops and Twists: How God Created the Universe, he uses the wisdom from science and challenges our thoughts on religion while reminding us of true spirituality. His approach leads us in a new view of how consciousness and science are related." -- Deepak Chopra

In his most important book since Taking the Quantum Leap, Fred Alan Wolf, PhD., explains how our understanding of time, space and matter have changed in just the last few years, and how with these new ideas we have a glimpse into the "mind of God."

Making comparisons to Hindu Vedic and Judeo-Christian cosmology, Dr. Wolf explains how the universal command of the Deity "Let there be light" now takes on a new scientific meaning: Everything is literally made of light and the reader will learn how quantum physics proves this is so. ## Bridging Science and Spirit

By Cynthia Sue Larson

What a joy it is to read a cutting-edge physics book written for the lay person! Fred Alan Wolf's book, "Time Warps and Space Twists" sets for itself the challenging goal of describing some of the newest physics explanations for how God created the universe in terms just about anyone can understand. Rather than oversimplifying concepts from physics, Wolf presents each theory and theorem in layman's terms which are clear enough for most anyone to follow. I especially love the way Wolf does such a marvelous job describing how our view of the world has changed so much in just the last few years with regard to things like the Higgs field, tachyons, and tardyons. Thanks to some of the newest findings in quantum physics, we can now "say bye-bye to causality in quantum field theory," providing us with fascinating insights about retrocausality and backward-through-time travel. Highly recommended for anyone interested in spirituality and science!

A great book to introduce quantum electrodynamics

By Arthur Altshiller

"Time Loops and Space Twists" is a unique effort that succeeds as a thought-provoking introduction to quantum electrodynamics. It is the first popularization I have encountered that puts fire into understanding a path integral approach to particle physics. Painstaking care enables the reader to gain a genuine feel for QED. Each argument is strengthened by footnotes that challenge both the neophyte and the specialist. The author's first person dialogue encourages the reader to puzzle through originally crafted graphical descriptions of time dilation. Carefully thought out cartoon arguments offers the reader visual rubrics to understand symmetry, antimatter and charge conservation. Contour integration becomes a conceptual tool to explain superposition but the rub is that the reader doesn't realize that she is a mathematical participant in any of this. Conceptual physics is at its best without any deceptive bells and whistles. Careful following of its footnotes also offers its reader a sedge way into Lagrange's equations and principles of least action. The first and last chapters present some personal ontological musings. However, the ten chapters in between are pure physics at its grandest. In total all of its twelve chapters are a delight and a gift from a most original thinker. As a secondary and community college educator, I would enthusiastically recommend this book to supplement a secondary advanced placement physics program or to enrich college level introductory physics. More importantly, the inquiring reader will receive a most unusual gift that offers intellectual integrity, humor, logos and even some wisdom.

Before What The Bleep There was Fred Wolf

By Tobin B. Crenshaw

Fred Wolf is passionate, to say the least. Read this book or his other ones or listen to him speak and you find someone who has searched for decades to live at the cutting edge of science and spirituality. From pursuing Shamans the world around to bring Quantum Physics to the masses, Wolf is a blast! A key player in What the Bleep, Wolf has been teaching these beliefs years before the movie. What beliefs? How observing a system changes how that system manifest; how waves can be particles and the reverse, depending on someone paying attention to them; how unpredictable the unseen world can be but how it is impacted by our thoughts, and how all possible outcomes exist at once until someone focuses and brings all possible outcomes to one outcome. The main message? You participate in creating reality. The difference coming from Wolf? He uses science to demonstrate this very real possibility.
